CPI Lubrication Offers On-Site Technical Field Service and Support...
Divider Block System Design, Complete Installation, Diagnostics and Trouble Shooting.
Positive Lubrication to Cylinders/Packing:
"CCT-HP" divider blocks give you the closest piston to valve tolerance in the world! 80 to 90 millionths-of-an-inch assures you precision lubrication of vital components, plus superior piston stalling for positive shutdown of the system should tubing be crushed or lubrication points become plugged.

O-Ring Seals on Outlet Sections:
Eliminates thread sealants on outlets and ensures exceptional sealing and ease of assembly.

Reduced Torque for Mounting Screws:
Reduce torque for mounting blocks on base section (65 in. lbs.) assures leak free operation to 7,500 PSI.

Wide Range of Piston Sizes:
Enables efficient design for cylinder and packing lubrication quantities.

One Piece O-Ring Seal Outlet Checks:
Assures reliable operation of the divider block system and eliminates oill leak problems.

Accessories for All Divider Block Systems

2 Year Warranty NeoMag Cycle Indicator

The NeoMag visual cycle indicator follows the divider block piston movement so the operator can monitor and control oil consumption, set lube rates and easily spot problems in the divider block system.
Part# NMT for CCT, Graco/Trabon, Ariel, Lubriquep & SB Divider Blocks.
Part# NML for Lincoln & Part# NMD for Dropsa.

2 Year Warranty Captured Proximity Switch
Protected by U.S. Patent # 6,823,279

The proximity switch sends a switch closure with each cycle of the divider block to the control panel, PLC or the profilo PF1, to monitor oil consumption and shutdown the compressor if the lubrication system begins to deteriorate.
Part# TPSO for CCT, Graco/Trabon, Ariel, Lubriquep & SB Divider Blocks.
Part# LPS for Lincoln & Part# DPS for Dropsa Divider Blocks. All components are enclosed in the magnet assembly. Never lose a spring, spacer or magnet again. Springs tested to 20 million cycles NO Broken Springs.

2 Year Warranty Reset Pressure Indicators

The reset pressure indicator identifies tubing or lubrication point blockage to enable the operator to quickly verify exactly which point is causing high pressure in the system.
Part# TRPI for CCT, Graco/Trabon, Ariel, Lubriquep & SB Divider Blocks.
Part# LRPI for Lincoln & Part# DRPI for Dropsa Divider Blocks.

5 Year Warranty Base Plate Outlet Check Valves

U.S. Patent Pending

The base plate outlet check valve assures reliable operation of the divider block system. The o-ring seal check valve and integral tube connection eliminates leaks in the system.
Part# 421PR-OR for CCT base plates.
Part# 421PR-NPT for Graco/Trabon, SB, Ariel, Lubriquep, Lincoln & Dropsa base plates.
No-Flow Devices to Protect Your Compressor

- Trends and Stores Divider Block System Operation to Monitor and Prove:
  - Oil Consumption (Over and Under Lubrication)
  - Lubricator Pump Failure
  - Divider Block Failure
  - Compressor Component Failure (Rings, Rod, Packing and Cylinders)
  - Compressor Run Time

- Shuts Down Compressor when Lubrication System Fails or Begins to Deteriorate:
  - Adjustable Alarm Time
  - Normally Open or Normally Closed Operation

- Installs on Divider Block or in Control Panel

- Wireless (IRDA) Download of Trending Information to Any Hand Held Palm Pilot or Palm Cell Phone Device

- Automatically Uploads All Files to Computer and Converts Information to Excel Graph

- Documents $ Costs for Over Lubricating Cylinders and Rod Packing

---

Reliable No Flow Shutdown Protection
WITH A FULL 3 YEAR WARRANTY

- 3 year full warranty
- 3.3 volt hermetically sealed, high temperature battery...
  5 year warranty and up to 10 year battery life
- AC or DC operation. Switch rated for 300 VDC & 120 VAC @ .5 amps
- Patented, sealed magnet assembly, NO lost magnets, springs or spacers......EVER
- Heavy duty magnet housing eliminates possibility of failure caused by bending
- Proximity switch output is standard with every unit
- Hall effect activated “unlimited duty cycle”...
  lifetime warranty

---

proflo Model PF1
Divider Block Monitor & No-Flow Shutdown Protection

Download to Palm Pilot Shows Complete History of Divider Block Operation:
- Total Oil Consumption
- Compressor Run Time Hours
- Compressor Operational Days
- Over Lubrication Costs

--

proflo Jr.

U.S. Patent # 5,836,372

---

CPI Lubrication Group
PROTECTING COMPRESSORS WORLDWIDE®
Pumps and Gear Boxes

Retrofit for Graco/Trabon “MVB”, Lincoln MCLP and American Bosch Gear Boxes and Pumps

High volume lube pumps and gear boxes for all Clark, Cooper Bessemer, Ingersoll Rand, Ariel and Worthington slow speed and high speed engines and compressors

2 Year Warranty on All Pumps

Ariel, Ajax, Gemini
Pressurized Suction Pumps 1/4”-3/8”-3/16”

In Stock Replacements for All Box Suction Lubricator Pumps: Lubricorp, Lincoln, Graco/Trabon, SB, Manzel, Premier

Pressurized Suction with Sight Glass for All Rotary Vane Vapor Recovery Compressors

Replacement Lubricator Pumps for All OEM Engines and Compressors

We Stock Lubricator Boxes For All Engine and Compressor Applications

Ariel 1 Pump
Ariel 2 Pump
Gemini
Ingersoll Rand RDS-HOS
Worthington Cub & Super Cub

2 Year Warranty on All Lube Boxes

White Superior
Ingersoll Rand VIP
AJAX Special: 1 Pump for Engine - 1 Pump for Compressor
AJAX DPC80-80-105-115-140-180-260-280-300-380-600-800

ELIMINATE CHECK VALVE FAILURE
5 YEAR WARRANTY FOR DIVIDER BLOCK SYSTEM CHECK VALVES

FEATURES:

- Provides oil barrier to protect the check valve sealing surfaces from hot gas and trash in the gas stream.
- Minimum fill capacity allows immediate delivery of oil to cylinders and packing.
- Pressure gauge port enables the operator to visually see when the rod packing is failing.
- Light weight and heavy duty connector eliminates failure due to vibration.
- Integral tube connector reduces leak paths.

The XDC installed with the CVP will Eliminate Check Valve Failure caused by heat and gas stream contamination.

Replacement Check Valves for All OEM Compressors and Divider Block Systems

- 0-950014-SMA0018-1/8"-FXM
  Clark, Energy Industries Cooper
  Bessemer, Ingersoll Rand, Premier

- 950014-1/4"x1/4" - FXF
  Ariel, Graco/Trabon,
  Lincoln, Lubricquip, SB

- 0-950014-SMA0014-1/4" - FXM
  Dresser-Rand – RDS-RDH-HOS-HHE,
  Gemini, White Superior, Worthington Cub

“SPTD” Single Point Test Device

- The compressor industry’s ONLY device capable of testing the quantity of oil injected into a single lubrication point, with the compressor running under actual operating temperatures and pressures.
- Tests the reliability of the divider block and lube pump to determine possible cause of premature failure of cylinders, rings and rod packing.

PURGE & TEST GUN

- Pre-Lube Cylinders and Packing
- Pressure Test Divider Blocks
- Purge Air from Lube System prior to Compressor Start-up

CPI Lubrication Group
PROTECTING COMPRESSORS WORLDWIDE®
Monitor and Totalize Your Engine and Compressor Oil Consumption
Oil Make-Up Meter and Transmitter Designed for Engine and Compressor Applications

Electronic Flow Transmitter Operation
As the gears rotate, a magnet on each end of the gear activates the reed switch to send a pulse to a PLC, digital control panel or digital counter to accurately monitor oil consumption of all engines and compressors.

Electronic Flow Meter Operation
Oil consumption is displayed on the LCD in pints, quarts or liters and is totalized in gallons or liters. Designed to accurately track oil usage of all engines and compressors.

NEVER REPLACE A RUPTURE DISC AGAIN!
No More Oil Spills on the Compressor
No More Blown Rupture Discs

Replaces All Atmospheric Rupture Assemblies on Divider Block Systems
U.S. patent # D597,498

Remove the Old Atmospheric Rupture Assembly & Install the “POPR”... It’s that Easy
“POPR” POP OPEN PRESSURE RELIEF

Increase Efficiency and Reliability of All Divider Block Systems Operating at High Pressure

The divider block system operates efficiently, only when pressure differentials between injection points in the system do not exceed 1000 PSI. If the system is not balanced properly, the pressure can cause the pistons to wear prematurely and allow the oil intended for the high pressure injection point to flow around the worn piston to the point with least resistance (lower pressure). By-passing oil will cause serious damage or premature failure to the compressor cylinders, piston, rings, rod and packing gland.

Eliminates Premature Wear of Divider Blocks and Reduces Piston By-Passing
Eliminates Blown Rupture Disc Problems - Simplifies Balancing the Divider Block System

System Filters

500042
High Pressure In-Line Filter
Maximum Protection for System Components

1212-B118
Low Pressure Filter Adapter
Operator Can Easily See It's time to Change the Filter

809052S
Stainless Steel Filter Element Has 6 Times Filtering Capacity of Sintered Bronze element
S.S. Ten Micron Filter Element Is Not Affected by Any Type of Contamination

“BVA” Balancing Valve Assembly

"XD" Extreme Duty Divider Blocks
When You Can’t Afford Compressor Downtime!
Compressor Industry’s Next Generation of Superior Divider Blocks

Made in USA
US PATENT #7,096,889
Other US Patents Pending

For All Engine & Compressor Applications

US PATENT #7,096,889
US Patents Pending

Dual Base Plate Mounting Pattern
- Enables Use of the "XD"4 Bolt Block or 2 Bolt Graco/Trammel Style Divider Valves

Added Mass Around Piston
- Decreases Stress Strain Expansion

2 Year Warranty

Mounting Screws Rest on Top of the Divider Block
- Eliminate Piston Bore Distortion

Four Allen Head Bolts
- Distribute Torque Evenly Across Divider block

Reduced Leak Paths
- Inlet and End Sections Machined as One Piece

Inlet Check Valve
- Traps Oil in Divider Block to Prevent Reverse Flow in High Pressure Service

2 Inlet Points (Top & Bottom) to Hydraulic Circuit
- Allows a Pressure Gauge To Be Mounted Directly to Top or Bottom of Divider Block

O-Ring Seal Outlets
- Requires No Thread Sealant & Accept NPT or O-Ring Sealed Outlet Check Valves

ONE PIECE O-RING SEAL CHECK VALVES W/ INTEGRAL TUBE CONNECTION

SAE Threads
- Enables The Use of Industry Standard Accessories, (Cycle Indicators, Shutdown/Monitoring Devices etc.)

Dual Purge Ports
- One On Each Side of The Base Plate Allows Efficient Purging of Air From The Divider Block Assembly

Compressors are running longer and harder in our industry & demand proper lubrication for efficient operation & longevity

"XD" Extreme Duty divider blocks are available in a wide range of piston sizes to ensure precise quantities of lubrication are injected to your rings, rods & packing

*XD* divider block assemblies consist of three (3) to eight (8) working sections, one (1) inlet section with integral intermediate, one (1) intermediate section for each working block, and one (1) end section with integral intermediate. A single assembly can feed from one (1) to sixteen (16) lubrication points.

Individual blocks marked "T" for "Twin" provide separate outlets to inject oil into two (2) lubrication points. Individual blocks marked "S" for "Single" are drilled internally to combine both outlets to double the output of lubrication to a single lubrication point.

Blocks Work at a New Level — 8000 PSI

U.S. patent # 7,096,889
